## Big Hexagonal Hut: Climbing, sliding, hiding...

The nicely shaped Big Hexagonal Platform makes a very good centrepiece for a play area. The appealing material and the harmonious design simply invite children to climb it, use it as a hidey-hole, and as a place for a chat. All levels can be reached via ladders.

The hut can be combined with various kinds of combination elements, such as a Climbing Wall with Grips, a Slide or Sand Play Equipment with sand hoist, sand pipe and sand wheel. It is also possible to attach bridge-like connecting parts, additional towers, platforms or huts.

In this case, another platform hut was equipped with an Inclined Wall and a Climbing Rope. From there, the children can cross a Rope Bridge to get to a Triangular Hut. The Triangular Hut in turn offers various opportunities for play and exercise, such as the attached Climbing Trunk with Handrail and the Vertical Climbing Net. The most important incentives that the platforms with combination elements provide, such as climbing up high and enjoying the view, are supplemented by the exercise activities climbing, sliding and balancing. Furthermore, the various modules with several levels offer numerous niches that can be used for hiding away as well as for imaginative role-playing games.
